

AAA WE ARE LOOKING FOR WILLING STUDENTS

There is the chance for two students (who have a car to move about and are able to drive it) to be involved into two projects evaluating the effects of some environmental enrichment protocols on the behaviour of individuals belonging to different species housed in controlled conditions:

- Project 1 - species involved: red kangaroo and wallaby
- Project 2 – species involved: blackbuck and marshbuck

Experimental design: ABAB, i.e., 4 phases, each lasting at least 2 weeks. For each experimental phase there would be at least 6 days of behavioural observations. A preliminary observation phase, of approximately 15 days will precede the experimental phases. Final dissertation projects in ethology require time and effort.

If interested, please contact: Dott.ssa Simona Normando (simona.normando@unipd.it)
